

AMP5270026

400 mW High Dynamic Amplifier Module 5 ... 2700 MHz

Features

- output power +26 dBm typ.
- high OIP3 +46 dBm typ.
- open/ short stable
- L/HF suppression
- wide DC supply range
- optical supply indication
- reverse polarity protected

Applications

- VHF/ UHF amplifier
- PA driver amplifier
- broadcast, GNSS
- laboratory
- test equipment

At a Glance

AMP5270026 from Becker Nachrichtentechnik is a compact amplifier module in 50 ohms technology designed for the use in professional applications. The robust electric and mechanic design gives solid operations over a long time. The amplifier works stable over a wide frequency range with many octaves. Internal filters and low noise voltage supplies guarantee high suppression of spurious. To avoid damages during installation the supply is protected against reverse polarity. For versatile use the amplifier works over a wide DC supply voltage range. The presence of DC power is indicated by a LED at the module. The amplifier module has an integrated heat sink.

Push Pull Technology

The internal wideband amplifier stages are designed in push-pull technology. This technology gives the amplifier high linearity performance and wider operation bandwidths. Compared with the linearity of single stage amplifiers the push-pull technology gives much better power efficiency with less heat generation. This saves costs for cooling and increases life time of the amplifier.

Special Features

The high IP3 properties makes the amplifier module suitable in professional receiving systems applications where weak RF signals in combination with very strong signals must be amplified without any distortion effects. An integrated high pass filter in the input suppresses unwanted signals in the VLF and HF range.

Tolerant to Mismatches

Using power transistors with enough head room to maximum ratings make the amplifier module robust against reverse power and therefore robust against loads at the output which are not matched. The output of the amplifier module is robust against open and short load at the output.

Rugged Design

The amplifier is housed in a milled aluminum case. This saves the circuits against mechanical damage and gives best shielding for avoiding EMI influences caused by radio signals coming from the environment.

DC Connector Variants

For mechanical integration into customer specific setups the amplifier module is available in variants with horizontal or vertical orientation of DC plug. This enables optimized DC cable routing to the amplifier module.
